

BODYGUARD

Intelligent Damage Detection

Multiple high-definition cameras strategically positioned to capture all corners of vehicles

Fully autonomous capture

Easy search and retrieve images by license plate

Floor mount or wall mount options available

Available as an optional feature of your FASTLIGN system or can be installed as a stand-alone.

Multiple high-speed cameras automatically capture images of the vehicle from different angles as they are driven into the workshop or drive-thru service lanes. Built-in License Plate recognition tags and archives the images. When required, just go into BODYGUARD's web-based image viewer, enter the license plate of the vehicle, and high-resolution images of the vehicle from all angles as it enters the shop are presented for verification. Specially designed scratch and dent detection camera is able to reveal small dents and scratches that cannot be easily seen with the naked eye or might be missed on a busy vehicle intake day.

Veh: 2014 Toyota Corolla
